ABOUT US

„Product quality, responsible approach to each customer, communication, professional and experienced team are the main priorities of our work.“

UAB Slėnis was founded in March 1991. Since 1995 the company has been focused on wood processing. We launched our business creating wood pallets, cutting timber, and manufacturing blanks for furniture. The company currently produces a wide range of furniture components, finger-jointed and solid custom-sized panels, boards, and laminated veneer lumber products. We use various woods: birch, ash, beech, and oak. Our production totals 400-500 m³ of finished products.

In 2014 the company updated its equipment and added new equipment: a relative humidity maintenance system, a modern dust-extraction ventilation system, an automatic tenoning line, planing and grinding equipment, and sawdust briquetting presses. A warehouse for raw materials was built, expanding the production facilities.

Most of our products are sold in European countries: France, Sweden, Norway, Finland, and Poland. In 2013 we began selling products to companies in the United States, Canada, and Korea. Our products are also marketed to Lithuanian furniture industry companies.
